SUMMARY

Senior Software Engineer with **3+ years** shipping production systems, specializing in applied AI: agentic LLM systems, multi-agent orchestration, RAG pipelines and AI workflow automation across the Claude, OpenAI and Gemini APIs. Built an LLM-powered delivery automation platform that raised team productivity by **50 to 60 percent**, and owned a production ERP for **100+ daily users** with zero downtime over 2.5 years. Deep full-stack foundation in Python, FastAPI, React/TypeScript, PostgreSQL, Redis and AWS.

TECHNICAL SKILLS

AI and LLM Engineering: LLMs, Agentic AI, Multi-Agent Systems, Retrieval-Augmented Generation (RAG), Prompt Engineering, Tool/Function Calling, Model Context Protocol (MCP), Fine-Tuning (LoRA), Multimodal AI (Vision, Voice, Image Generation)

LLM Frameworks and APIs: Anthropic Claude API, OpenAI API, Google Gemini API, LangChain, LangGraph, CrewAI, Claude Code, Claude Skills

LLMOps and Safety: LLM Evals, Langfuse, LangSmith, Guardrails, Prompt-Injection Defense, Ollama, vLLM, Open-Weight LLMs

Backend and Data: Python, FastAPI, SQLAlchemy, Pydantic, REST APIs, WebSockets, Microservices, PostgreSQL, pgvector, Pinecone, Qdrant, MySQL, Redis, Supabase

Frontend: React, TypeScript, JavaScript

Cloud, DevOps and Security: AWS (EC2, S3, IAM), Docker, Nginx, Cloudflare, Linux, GitHub Actions (CI/CD), OAuth2, JWT, RBAC

Automation and Tooling: n8n, Cursor, GitHub Copilot, Git, pytest, Bruno

EXPERIENCE

Metron Security

Senior Software Engineer

Software Engineer

Pune, India

May 2026 - Present

Jun 2025 - May 2026

- Built a multi-stage, **LLM-powered software delivery pipeline** on the Anthropic Claude API that automates research, documentation, spec creation, validation and deployment workflows, raising team productivity by **50 to 60 percent**.
- Designed an **agentic AI system** that routes natural-language commands to the right automation via context-injected instruction sets and tool/function calling, running multi-step workflows end to end and opening automation to non-technical users.
- Codified reusable AI engineering workflows with **Claude Code**, custom **Claude Skills** (SKILL.md capability modules) and **MCP** integrations, cutting delivery time for every new automation task.
- Built Python integration services for a **CrowdStrike**-based security plugin platform across REST APIs with varied auth (OAuth2, API Key, HMAC, AWS SigV4); a shared transformation layer adds integrations without touching existing pipelines.
- Hardened pipelines with retry logic and exponential backoff, and shipped on AWS with structured JSON logging, health-check alerting and GitHub Actions CI/CD.

Integrated Active Monitoring

Full Stack Engineer

Pune, India

Nov 2022 - Jun 2025

- Owned every layer of a production ERP (30+ modules) used daily by **100+ field engineers**: database schema, FastAPI backend, React/TypeScript frontend and deployment, with **zero downtime over 2.5 years**.
- Designed 40+ FastAPI endpoints on a three-layer architecture at **p95 under 200ms**; used EXPLAIN ANALYZE to fix missing indexes and N+1 ORM patterns, cutting report queries from **8s to under 3s**.
- Introduced Redis caching for aggregations and lookups, reducing database load by **~40%** and dashboard response times from **~800ms to under 200ms**.
- Implemented JWT auth with 3-role RBAC (zero access-control incidents), drove pytest coverage above **90%** on core logic, and refactored **~3,000** lines of procedural code into a clean service layer.

PROJECTS

JobPipe: LLM-Powered Job Matching and Document Generation Engine

Python, Claude API, SQLite, LaTeX

- Built a multi-source ingestion pipeline that pulls postings from **8 ATS platform APIs** (Greenhouse, Lever, Ashby, Workday and more), with automatic source detection, normalization, SQLite deduplication and weighted relevance scoring.
- Built a grounded LLM generation layer that produces tailored, ATS-safe PDF documents from a verified fact bank, with a **validation guardrail** that blocks hallucinated technologies and unverifiable metrics before output.

ProctorHire: Remote Interview Platform (proctorhire.com)

FastAPI, React/TypeScript, PostgreSQL, Nginx

- Production platform with sandboxed in-browser code execution across 5 evaluation types, real-time WebSocket proctoring (**sub-100ms**) and JWT RBAC for admin, recruiter and candidate roles; self-hosted on a Hetzner VPS.

Query Reports: Secure SQL Reporting Engine (GitHub)

Python, FastAPI, SQL

- REST API that safely runs parameterized SQL against production databases and returns CSV/JSON datasets, with input validation and query sandboxing against injection; in active production use.

EDUCATION

Vishwakarma Institute of Technology

Bachelor of Technology, Mechanical Engineering (CGPA: 8.57/10)

Pune, India

2020 - 2024
